# THERMAL INSULATION PROTECTS AGAINST FIRE

SHIELD SUPER-HEATED ENGINE COMPONENTS. QUICK-FIT SYSTEM FOR TURBOS, MANIFOLDS AND EXHAUST PIPES

SOLUTIONS FOR  
ATLAS COPCO  
CAT  
EPIROC  
HITACHI  
KOMATSU  
LIEBHERR  
SANDVIK  
TEREX

## THERMAL BLANKETS – YOUR LAST LINE OF DEFENCE?

Thermal Insulation Blankets create a physical barrier between high temperature engine and exhaust parts, and flammable liquids. Install Thermal Blankets on these components to protect against engine fires.

- Fire mitigation - Blankets reduce surface temperatures below fuel ignition points
- Maintenance crews can access engine bays sooner during long cool-down periods
- Quick-fit springs for faster installation
- Lobster-back design prevents flammable fluid pooling and helps resist infiltration

Aletek have machine-specific blanket designs ready to go for your fleet. Ask about our onsite services, install guides, training and more.

Turbo and manifold insulation is critical, define an insulation spec for assets

Protect your crew and extreme-heat sensitive components like wire cables

Blanket kits in stock for dozers, drills, excavators, graders, loaders, trucks and more
